Command Line

The "Command Line" emulates command line interface in the Web interface. This allows managing and monitoring the device by using all the commands and functions that are available via standard CLI. In order to run one or a set of WANFleX commands, type them in the command field and then click the "Execute" button. The output of the commands is displayed in the section above the command field.

```
InfiMUX Master#console>system uptime; config show
Uptime: 02:36:04
Last reboot reason: unexpected restart
*** Please change default Login and Password !!! ***
# R5000 WANFleX H09S01-MINTv1.90.46 * Aug 28 2020 08:22:49 * SN:306190

Command: `system uptime; config show`

[Execute] [Clear All Fields]

In the "Command Line" the commands are only executed, but not saved into the configuration, while in "Extra commands" section from "Basic Settings" menu, the commands are executed and saved into the configuration.
